

Join the Revolution Gagemaker's Blue Line Revolution

It's a revolution to save money, improve connection performance, and deliver orders ahead of schedule without searching for rental gages. Gagemaker's new **TDWIN TAPER** Software and **Joint Strength System** puts the control back in your hands.

The first time you use it, our new method of threading and inspection pays for itself. You can now set up and thread any API rotary shouldered connection immediately to a higher quality than ever before. The system controls the pitch diameter and thread cone interference fit of both connection members so well, you may never have to reface or rethread a connector again.

For nearly 30 years, Gagemaker has provided quality inspection products to the energy industry, and we're just getting started.

Visit Gagemaker.com to explore all of our time saving products.

Gagemaker's New **JSS** Joint Strength System for Rotary Shoulder Connections

Gagemaker's **TDWIN TAPER** software program produces dimensional drawings and inspection data for API downhole tubular connectors based on the most current industry standards. Everything you need to machine, inspect, and document tubular connection threads is available in this convenient software program.
